RESEARCH INTERESTS

Transportation and economics as they relate to logistics and global freight distribution. Area interests involve North America, Latin America and the Caribbean, and East and Southeast Asia. Specific topics over which he has published extensively cover maritime transport systems and logistics, global supply chains and production networks, gateways and transport corridors.

Maritime Shipping and Global Trade

Vertical and horizontal integration in liner shipping, terminal operations and logistics. Developments in seaport systems in light of shifting socioeconomic trends and capacity changes such as the expansion of the Panama Canal. The insertion of transshipment hubs in shipping networks.

The Governance of Intermodal Transportation Assets

Investigating public and private roles and strategies in the setting and operations of global freight distribution systems. The role of global equity firms, terminal operators and shipping companies in global supply chains. The financing of global supply chains.

Geography of Logistics and Global Production Networks

Investigating conceptual and empirical aspects behind the emerging geography of logistics and freight distribution. Particular issues involve global production networks, international / regional freight distribution, shifts in manufacturing, third-party logistics, location within complex multinational supply chains, green/reverse logistics and sustainability.

Gateways, Corridors and Inland Freight Distribution

Investigating the relationships between major transport gateways and regional / urban freight distribution. Specific aspects involve inland terminals, rail transportation, the logistics industry, distribution centers and distribution clusters (logistics zones).

The Containerization of Commodities and Cold Chain Logistics

The impacts of the containerization of the commodity sector, its niche market opportunities and its effects on global and regional container flows. The emerging market of refrigerated containers supporting food trade (perishables) is also investigated.

The Regionalization of Port Terminals

Investigating the impacts of globalization processes on transport terminals, notably maritime and rail terminals and freight distribution centers. Involves the regionalization of hinterlands, economic cycles and international trade.

City Logistics

Issues related to the urban circulation of goods. Urban and suburban freight distribution. Urban logistics zones. Impacts of ecommerce and reverse logistics. Sustainable urban freight transport systems.

Cruise Shipping

Geographical aspects of the industry, including itineraries and ports of calls. Cruise markets, seasonality and network configuration.
